TECHmosis the Small Business Server Specialists

Linux Small Business Server

Background

This document seeks to outline the strategic and competitive advantages you can derive when choosing a Zentyal Server in place of a Microsoft Small Business Server. TECHmosis is the first professional ICT Services company within Australia to partner with Zentyal, the developers of the BEST Linux Small Business Server anywhere in the world today! So why is Zentyal so much better than Microsoft Small Business Server?

Well, firstly there is the cost. This, of course, depends on your needs and is modular so you only pay for what you really need. Zentyal is based on a subscriptions model that is over 50% cheaper than the comparative Microsoft licensing model when compared over the life of the server. Click this link [Zentyal 2.x feature list](#) to check all the features included in the latest release of the Zentyal small business server.

Secondly, Zentyal can be both a standalone server, combined with other Zentyal servers, or can be fully integrated into existing Microsoft Active Directory infrastructure. Click this link to understand this further: <http://www.techmosis.com.au/scenarios.html> .

Thirdly, when you combine Zentyal with the Zarafa Groupware add-on you gain Microsoft Exchange functionality directly connecting MS Outlook via MAPI and also providing SMART phone synchronisation for emails, calendar and contacts. All of this for less than 50% of the normal licensing costs required for a Microsoft Small business Server. Zentyal is a global enterprise and growing rapidly. TECHmosis and Zentyal together offer an established global support matrix for your business to rely upon as well. Contact TECHmosis for an obligation free quote on a Zentyal Server today. <http://www.techmosis.com.au/contact.html>
